Eivind Mikael Lindbråten

Web & app developer

Relevant Work

Ways AS, Co-founder & developer.

2015–2017

In 2009 I co-founded Ways AS, a web and app development company in Norway, and helped it grow to five employees. I had varying responsibilities, from administrative tasks to project leader and iOS and web developer. With Ways I got the chance to work on large projects, and learn all the parts of making great products. Everything from running workshops, research, design, communication, and how to develop products as a team.

Freelance developer.

2009–

I have been doing freelance work since 2009. In 2016 I decided to go freelance full time. I consider myself a full stack developer with a focus on web and iOS/macOS/watchOS development. As a web developer I focus on clean, structured and maintainable code and strive for good push to deploy workflows to reduce points of failure, and to support continuous deployment strategies. I have experience with different CMS' and frameworks, and love to learn the newest technologies. I follow the Apple eco-system closely and iOS/macOS/watchOS development is a passion. I follow the community closely and love to test out new apps and see how things are done and spot out trends. From this I can make apps that feel relevant and at home in the Apple eco-system.

Master thesis

Title: *Automatic hyphenation—a rule-based approach to hyphenation*

Abstract: Current systems for hyphenation is based on pattern recognition, which doesn't map well onto the ruled-based Norwegian hyphenation approach. The hypothesis for this thesis is that it would be possible to achieve better hyphenation results, by implementing a word/language/lexical parser and with this information apply the hyphenation rules. The thesis tries to answer this problem, and also implements a rule based hyphenator in ruby. Supervisor was Dag Langmyhr. The thesis can be read [here](#).

Education

Social Entrepreneurship, University of Oslo & University of Cape Town Graduate School of Business.

2015

Took part in a one semester program in social entrepreneurship. There were two courses, ENT4000 (*From idea to business*) and ENT4500 (*Social entrepreneurship*), and a three month stay in Cape Town, South Africa. In Cape Town, I had class once a week at the GSB. The rest of the week was spent as a business consultant at CodeX, with a class mate, developing a business plan for their new venture.

Master Computer Science, University of Oslo.

2012–2015

Graduated with a masters degree through the masters program *Informatics: programming and networks*, with 60sp of courses and a 60sp master thesis.

Bachelor Computer Science, University of Oslo.

2009–2012

Graduated with a bachelor degree through *Informatics (bachelor)* program. The program had a wide range of varying courses and a lot of open courses, which let me follow my own curiosity, and gave me a broad overview of the field.

Volunteer Work

Byverkstedet, Board member & instructor.

2013–2018

Since 2013 I have been involved in Byverkstedet's activities as a volunteer. Since 2015 and until 2018 I have been a board member of Byverkstedet. I also participate as a workshop instructor, with a focus on workshops combining traditional materials and techniques with the digital and electronics.

Keywords

Personal: Curious and loves to learn, visual experience, process oriented

Languages: Norwegian (native language), English (fluent)

Programming languages I work with regularly: Swift for iOS & macOS, Node.js, HTML/CSS/JS (Gulp/Webpack/Sass/ES6), PHP

CMS and frameworks I worked with recently: Craft CMS, Vapor, VueJS, AdonisJS, Express
